DEDICATION

With Genuine Humility, I Acknowledge Your Aid, O God !  
In The True Spirit Of Islam, I Appreciate Your Grace, O God !  
WITH ALL My Heart, I Thank You, O God !

"HIDUPLAH sebagaimana yang engkau sukai (tetapi ingat)  
bahawasanya engkau akan MATI, dan CINTAILAH siapa yang  
engkau sukai (tapi jangan lupa) bahawasanya engkau akan  
BERPISAH dengan dia, dan BUATLAH apa yang engkau kehendaki  
(tapi ketahuilah) bahawasanya engkau akan menerima  
BALASAN yang setimpal dengan nya"

#### DEDICATION

With Genuine Humility, I Acknowledge Your Aid, O God !

In The True Spirit Of Islam, I Appreciate Your Grace, O God !

WITH ALL My Heart, I Thank You, O God !

Without Your Guidance And Love,

This Work Would Not Have Been Possible,

Were If Not For Your Help And Cause,

This Humble Contribution Would Have Never Become A Reality,

And If It Is Worth Dedicating,

Please Bless It With Your Acceptance,

It Is Dedicated To You, O God !

Panel Examiner

Date : 1/4/83

## ACKNOWLEDGEMENTS

The author wishes to express his profound appreciation and gratitude to his supervisor, Assoc. Prof. Captain Mohd. Ibrahim Hj. Mohamad, Dean Faculty of Fisheries and Marine Science, for his valuable suggestions, constructive and close guidance during the duration of his project.

Sincere thanks are extended to Fusan's Lighthouse Fishing Net, especially to Mr. Michael S.S. Lew, Sales Manager, for his contribution in providing samples of local netting twines for his project.

The author also wishes to express his appreciation to the laboratory staff of Faculty of Fisheries and Marine Science, especially to Mr. Zainam Ahmad Ariffin and others for their assistance and guidance.

Special thanks are also due to Cik Naimah Mohd Salleh from the Department of Human Development, Faculty of Agriculture for her permission to use the load cell of the tensile testing machine, making possible to continue his project.

Last, but not least, he would like to thank to all his friends and fellow coursemates, especially to Mr. Muhamad Hatta Hj. Mahmud, who helped in one way or another in thought, word or deed.

**ABSTRAK**

Sangat sedikit yang telah diterbitkan pada dewasa ini tentang sifat-sifat fizikal utama benang-benang jaring tempatan jika dibandingkan dengan kepentingannya yang luas terhadap perusahaan perikanan di negara ini. Manusia telah mempelajari tentang benang-benang jaring tempatan melalui pengalaman-pengalaman tetapi rumusan-rumusan yang betul berdasarkan kepada data-data yang tepat dan konkret adalah selalu tidak didapati.

Didalam projek ini, penulis akan cuba memberikan setengah daripada sifat-sifat fizikal utama benang-benang jaring tempatan dalam keadaan basah dan jadual-jadual yang menunjukkan sifat-sifat fizikal ini adalah disertakan.

Sifat-sifat fizikal utama yang penting dalam penilaian benang-benang jaring tempatan yang diukur termasuklah garis pusat (diameter), bilangan belitan (number of twist), berat basah (wet weight), halaju tenggelam (sinking speed), kekuatan tegangan (tensile strength), kekuatan pemutusan (breaking strength), jarak panjang pemutusan (breaking length), pemanjangan pada takat putus (extension at break), kekuatan pemutusan simpul (knot breaking strength) dan keanjalan dan sifat-sifat pemanjangan (elasticity and extensibility) dalam keadaan basah.

*Cara-cara yang digunakan bagi mengukur sifat-sifat fizikal di atas diterangkan secara lengkas. Definasi dan istilah sifat-sifat fizikal dan cara pengukuran serta jadual penukaran sistem pengenalan benang jaring yang lama kepada sistem "tex" juga disertakan untuk tujuan lebih memahami lagi kajian yang dijalankan.*

*Importance to fishing industry in the country. People have learned about local-notting technic by experience but definite conclusions*

*Benang-benang jaring yang dipilih adalah sesuai untuk kegunaan dalam perikanan secara kommersial di negara ini termasuklah Polietilin (Polyethylene), Saran Nilon dan Nilon. Ramalan-ramalan dari segi kesesuaian benang-benang jaring tersebut terhadap tiga jenis alat menangkap ikan di negara ini dibuat. Disebabkan benang-benang jaring yang berlainan dicipta untuk berbagai kegunaan, jadi tidak semua sifat-sifat fizikal benang-benang jaring dikaji. Oleh itu jadual-jadual yang dilampirkan adalah tidak lengkap.*

*Penulis juga menggariskan sifat-sifat yang ideal bagi bahan-bahan sintetik untuk kegunaan dalam pembinaan alat-alat menangkap ikan yang diberikan oleh Lonsdale, (1959), yang sehingga sekarang masih belum lagi wujud.*

*The test procedures used to measure the physical properties will be briefly described. Definitions and terms of the physical properties and testing methods are given for the proper understanding of the study. Formula and conversion tables from the conventional system of numbering notting twines to the system are also included.*

The materials tested ABSTRACT are generally suitable for use in commercial fishing gears in the country include Polyethylenes (PE), Sisal fiber (Cottony Linens Chloride). Very little has been published to date on the main physical properties of local netting twines, inspite of its vast importance to fishing industry in the country. People have learned about local netting twines by experience but definite conclusions based on exact and concrete data are not always available.

In this project, the author attempts to bring out some of the main physical properties of local netting twines under wet state and tables showing the physical characteristics in the wet state are given.

The main physical properties of primary importance in the evaluation of netting twines considered include diameter, number of twist, wet weight (water absorption), sinking speed, tensile strength, breaking length, breaking load (unknotted), knot breaking strength, extension at break and elastic recovery under the wet conditions.

The test procedures used to measure the physical properties above are briefly described. Definitions and terms of the physical properties and testing methods are given for the proper understanding of the study. Formula and conversion tables from the conventional system of numbering netting twines to tex-system are also included.

The materials tested, in forms are generally suitable for use in commercial fishing gears in the country include Polyethylene (PE), Saran Nylon (Polyvinylidene Chloride + Polyamides) and Nylon and an estimate is generally made on the suitability of the materials to three main types of fishing gears in the country. Because different materials were designed for different applications, not all physical properties of the materials are measured, and the accompanying tables is therefore not complete.

The author also outlines the desired characteristics of the ideal synthetic materials for use in fishing gear given by Lonsdale, (1959) which at the moment does not exist.

2.3	Testing methods	6
2.3.1	Diameter	7
2.3.2	Number of twist	8
2.3.3	Stringing speed	11
2.3.4	Wet weight(water absorption)	11
2.3.5	Wet tensile strength	14
2.3.6	Wet breaking length	16
2.3.7	Wet breaking strength	17
2.3.8	Wet knot breaking strength	18
2.3.9	Extension at break	21
2.3.10	Elastic recovery	21
2.4	Definitions and terms	22
2.5	Conversion formulae and tables	22
